Problem Statement #48: Incident Escalation & On-Call Rotation Engine — Jira project: OCE

OCE-1 – Epic 1: Alert Ingestion & Escalation Engine

Ingest inbound monitoring alerts, resolve the active on-call engineer, and drive the multi-tier escalation ladder until the incident is acknowledged. Covers FR-001 and FR-004.

Priority: High Stories: 5 Points: 29

Key	User Story	I want	So that	Pts	Priority	Traces to
OCE-6	Story 1.1: Alert Ingestion Endpoint <i>As a monitoring system</i>	I want to push incident alerts to the engine over an authenticated webhook	So that every detected fault is registered as a trackable incident	5	High	FR-001
OCE-7	Story 1.2: Resolve Active On-Call Engineer <i>As a system</i>	I want to look up the engineer currently on call from the rotation schedule when an alert arrives	So that the alert reaches a named human instead of a shared inbox	3	High	FR-001
OCE-8	Story 1.3: Timeout-Based Escalation to Secondary <i>As an incident commander</i>	I want the engine to escalate to the secondary engineer when an alert is unacknowledged for 5 minutes	So that no P1 incident is silently dropped	8	Highest	FR-001
OCE-9	Story 1.4: Configure Escalation Ladder <i>As an incident commander</i>	I want to define a per-team escalation ladder of up to five tiers	So that each team's severity policy is respected rather than a hard-coded default	8	Medium	FR-004
OCE-10	Story 1.5: Per-Tier Channel and Timeout <i>As an incident commander</i>	I want to set the notification channel and timeout individually for each ladder tier	So that escalation pacing matches how urgently that team must respond	5	Medium	FR-004

OCE-2 – Epic 2: On-Call Rotation Scheduling

Let an Incident Commander build and maintain time-zone-aware shift rotations that the escalation engine reads from. Covers FR-002.

Priority: High Stories: 4 Points: 16

Key	User Story	I want	So that	Pts	Priority	Traces to
OCE-11	Story 2.1: Create Rotation Schedule <i>As an incident commander</i>	I want to create a rotation schedule and assign engineers to shifts	So that the team has a single authoritative source for who is on duty	5	High	FR-002

Key	User Story	I want	So that	Pts	Priority	Traces to
OCE-12	Story 2.2: Time-Zone-Aware Shift Definition <i>As an incident commander</i>	I want to define each shift with a start time, end time and explicit time zone	So that handover across regions is unambiguous	3	High	FR-002
OCE-13	Story 2.3: Who-Is-On-Call Lookup <i>As an on-call engineer</i>	I want to query who is on call at any given timestamp	So that I can confirm coverage before I step away	3	High	FR-002
OCE-14	Story 2.4: Edit Shifts and Swaps <i>As an on-call engineer</i>	I want to edit or swap an assigned shift	So that cover can be arranged without editing the whole rotation	5	Medium	FR-002

OCE-3 – Epic 3: Incident Acknowledgement & Response

Allow an On-Call Engineer to acknowledge an incident from the web console or by SMS reply, and stop the escalation ladder on acknowledgement. Covers FR-003.

Priority: High **Stories:** 3 **Points:** 16

Key	User Story	I want	So that	Pts	Priority	Traces to
OCE-15	Story 3.1: Acknowledge from Web Console <i>As an on-call engineer</i>	I want to acknowledge an incident from the web console	So that I can claim ownership while working at my desk	3	High	FR-003
OCE-16	Story 3.2: Acknowledge by SMS Reply <i>As an on-call engineer</i>	I want to acknowledge an incident by replying to the SMS notification	So that I can silence the ladder from my phone away from a laptop	5	High	FR-003
OCE-17	Story 3.3: Halt Escalation on Acknowledgement <i>As an on-call engineer</i>	I want all further notifications for an incident to stop once it is acknowledged	So that I am not buried in an alert storm for work I already own	8	Highest	FR-003

OCE-4 – Epic 4: Post-Mortem & Incident Closure

Capture root cause, timeline and action items for resolved incidents and surface any incident left without a post-mortem after 72 hours. Covers FR-005.

Priority: Medium **Stories:** 3 **Points:** 10

Key	User Story	I want	So that	Pts	Priority	Traces to
OCE-18	Story 4.1: Record Post-Mortem <i>As an incident commander</i>	I want to record root cause, timeline and action items against a resolved incident	So that the team learns from the outage rather than repeating it	5	Medium	FR-005

Key	User Story	I want	So that	Pts	Priority	Traces to
OCE-19	Story 4.2: Flag Missing Post-Mortems <i>As an incident commander</i>	I want the system to flag any incident with no post-mortem 72 hours after resolution	So that follow-up work does not quietly lapse	3	Medium	FR-005
OCE-20	Story 4.3: Pending Post-Mortem List <i>As an incident commander</i>	I want to view a Pending Post-Mortem list	So that I can chase outstanding write-ups in one place	2	Low	FR-005

OCE-5 – Epic 5: Platform Reliability & Auditability

Meet the dispatch-latency, availability and immutable-audit obligations the platform is held to. Covers NFR-001 and NFR-002.

Priority: High **Stories:** 3 **Points:** 16

Key	User Story	I want	So that	Pts	Priority	Traces to
OCE-21	Story 5.1: Sub-3-Second Alert Dispatch <i>As an on-call engineer</i>	I want notifications to be dispatched within 3 seconds of alert ingestion	So that dispatch delay is not added to incident downtime	8	High	NFR-001
OCE-22	Story 5.2: Immutable Audit Trail <i>As an incident commander</i>	I want an immutable audit entry for every schedule change, notification and acknowledgement	So that escalation disputes can be settled from the record	5	High	NFR-002
OCE-23	Story 5.3: Availability Monitoring & Uptime Report <i>As an incident commander</i>	I want platform health monitoring with a monthly uptime report	So that we can prove the 99.9% availability commitment	3	Medium	NFR-002

Totals: 5 Epics | 18 User Stories | 87 Story Points

Story points follow the Fibonacci scale (1, 2, 3, 5, 8), reflecting the increasing uncertainty attached to larger pieces of work rather than a linear measure of hours.
